

Free Strategy Test: What to Send Us

Project Anchor tests trading strategies independently and for free. We write down the pass bar before we run anything, and you get the full report whether your strategy passes or fails.

What we need from you

1. **Entry and exit rules.** Plain words or pseudocode are both fine. Cover:
 - what triggers an entry, and in which direction;
 - stops, targets and time exits;
 - position sizing;
 - what happens when signals overlap.
2. **Instruments and venue.** For example, BTC perpetual on a given exchange, or a list of stocks.
3. **Timeframe.** The bar size, plus when decisions are made and when orders fill.
4. **Data period you used.** Start and end dates, and the data source if you know it.
5. **Cost assumptions.** Fees per side, slippage, and funding or borrow costs.
6. **Parameters you tuned.** Tell us which ones, the ranges you tried, and the period you tuned them on. This is how we tell your in-sample period from your out-of-sample period.
7. **The result you believe you have.** For example, "+0.3R per trade", "Sharpe 1.2" or "60% win rate", and over which period.
8. **Optional:** any criterion you want added to the pass bar, and whether we may publish the result.

What we do

- **We write the pass bar first.** Before running anything, we write down the rules and the pass criteria and record their SHA-256 hash. You can share the hash publicly before the run if you like. Nothing changes after it is locked.
- **We test net of your costs.** The test includes an in-sample/out-of-sample split and a **random-entry baseline**: the same exits with coin-flip entries, to check whether your entry signal beats luck.
- **You get the full report** whatever the outcome, structured like our sample report (TSMOM_D_V1).

What we never need

- Account access, logins or **API keys**.
- **Funds**, or permission to trade on your behalf. We do not manage money, run copy-trading or place orders.
- Your code, unless you choose to share it. A rule description is enough.

Our commitments

- **The test is free.** There is no fee, and no sales pitch tied to the result.
- **We publish only with your consent.** Your rules and results stay private unless you say otherwise.
- **We report honestly.** We will tell you if your strategy fails, and why.

Not investment advice. A backtest is a historical simulation and does not predict future returns.

How to send: reply to us on LinkedIn, or on X at x.com/ProjectAnchorHQ.
